SKILLS

Languages: C++, JavaScript, TypeScript, SQL, HTML/CSS

Frontend: ReactJS, Redux, Bootstrap, Material UI

Tools and Database: Git, Docker, Firebase, Heroku, PostgreSQL, MySQL

EXPERIENCE

SynchroGrid, Inc.

Software Engineer

Sept 2024 – Oct 2025

Bryan, Texas

- Built and optimized **front-end features in ReactJS** for **SARA (Settings Automation Relay Assistant)**, SynchroGrid's flagship automation software for power system protection.
- Streamlined **user interface and workflow automation**, enhancing usability for protection engineers and reducing setup time for settings automation.
- Improved application **performance, responsiveness, and maintainability**, contributing to increased adoption of SARA among engineering teams.
- Contributed to **code reviews, debugging, and testing** to improving software reliability and reduce release issues.

Texas A&M University

Graduate Teaching Assistant

Jan 2023 – May 2024

College Station, Texas

- Led bi-weekly lab sessions covering software engineering, web development, SQL, and client-server programming.
- Mentored undergraduate students in debugging, testing, and full-stack web application development.
- Provided hands-on guidance in JavaScript, Java, HTML/CSS, and SQL through practical coding exercises.

Danphe Software Labs

Full-Stack Web Developer

Sept 2020 – Jun 2022

Kathmandu, Nepal

- Developed and maintained an inventory management platform, contributing to both backend API development (**40+ APIs**) and frontend feature implementation.
- Developed a **HR management system**, streamlining leave requests and improving operational efficiency.
- Built a **company's business website**, which enhanced the company's online presence and client engagement.
- Mentored a junior developer on project workflows and frontend development best practices.

PROJECTS

Project Management Tool / Kanban Board: Built a full-stack task management system using ASP.NET Core REST APIs, Entity Framework, React, and JWT-based role-based authentication.

Cybersecurity Certificate Tracker: Developed a client-driven Agile full-stack platform using Ruby on Rails, PostgreSQL, React, and Redux for state-managed workflows.

Leave Management System: Built an HR workflow application with role-based leave approvals using Ruby on Rails backend and Redux-powered React frontend.

Network Optimization (Max Bandwidth Path): Implemented Dijkstra's and Kruskal's algorithms in C++ with randomized graph generation for bandwidth optimization and performance analysis.

Unix-Based Operating System: Developed a simplified Unix OS in C++ supporting paging, threading, file systems, and virtual memory to simulate kernel-level operations.

EDUCATION

Texas A&M University

Master of Computer Science | GPA: 3.91

Aug 2022 – May 2024

College Station, Texas
